

Soundbox Store has the highest acoustic technology-designed portable meeting rooms, Zoom rooms and phone booths. We promote functional, inspirational, creative, and productive working environments.

Manufactured from recycled carbon polymer composite panel, aviation-type aluminium, and high density tempered glass for the main structure of the pod/booth. The designers and engineers advanced modelling simplifies the fabrication of pods/booth frames via a singular fixing tool.

Insul Marshall simulation ensures well-designed and quality acoustic performance sound transmission and insulation properties of the booth.

With the recent introduction of our turbofan and highly efficient airflow system, the air is refreshed in two minutes, guaranteeing excellent oxygen rates. A low-noise air system via multi-channel air ducts allows minimum noise disturbance inside and out.

Primarily an acoustic control company, technically engineers; design-wise, we are creators. Our furniture packs have been developed over years of trials and customer feedback: functional, comfortable, and organic design whilst maintaining hard-wearing upholstery, quality and finish.

# 10 YEARS IN THE MAKING

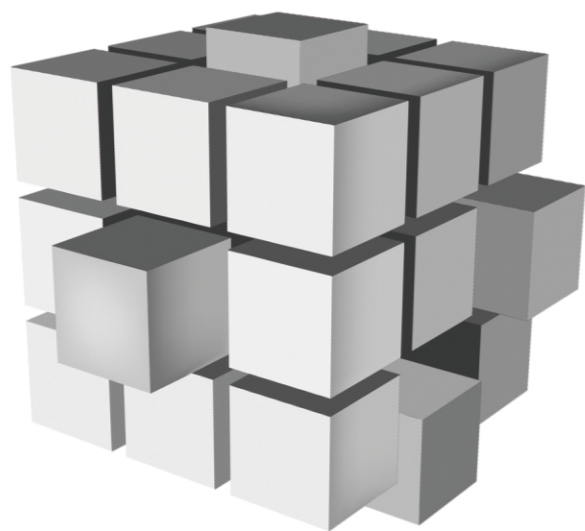

Soundbox Store is a professional acoustic technology company with over a decade worth of engineering experience.

From our prime manufacturing facility located in the far east, to mature and developing markets in Europe, our quality innovative zoom rooms and phone booth pods strive to motivate whilst offering the best in office solutions that are fundamentally relevant in the field of productivity, exceptional working environments, and acoustic control.

# EVOLUTION

Soundbox Store is the exclusive distributors, stockist, and warranty department of the main East Asian manufacturing company.

Soundbox Acoustics started from the first industrial application of our Sound Booths in 2012. We launched the very first commercial Sound Booth 2013 in Tokyo. Partnering with professionals from different industry sectors to help deliver consistent, reliable and competitive acoustic control, insulation, and damping solutions.

## FLEXIBILITY

---

Soundbox Store booths offer creative acoustic-controlled phone booths and meeting pods, fulfilling the demand for various creative works. The recycled carbon polymer composite panel, aviation aluminium and insulating glass form the main structure of the booth.

Our designers and engineers modelled and simplified the booths assembly with only one type of fastener. Insul Marshall Acoustic simulation ensures well-designed and performance sound transmission and insulation properties of the booth.

---

## LOW CARBON

---

Soundbox "Silence Booth" is the first company use recycled carbon plastic materials.

For each Soundbox booth:

Carbon footprint  $\leq 0.071\text{kg Co}_2\text{e}$ , energy consumption  $\leq 0.4\text{MJ}$

Air acidification  $\leq 0.0001\text{kg SO}_2\text{e}$ , water eutrophication  $\leq 0.00002\text{PO}_4$

Care for our global home with technology.

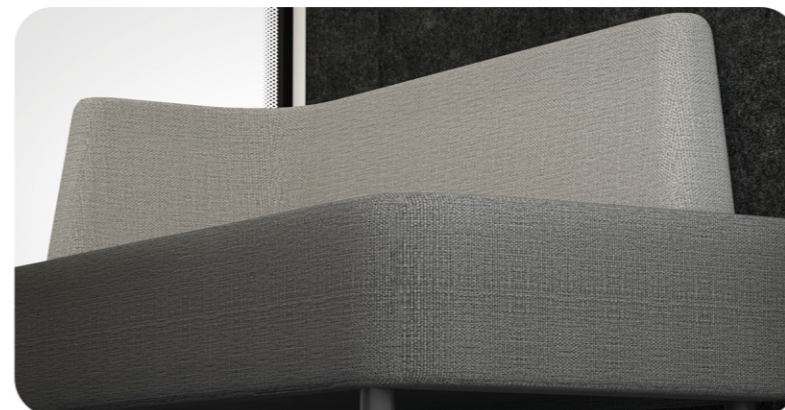

---

# Acoustic Phone Pod / Meeting Pods

Our Acoustic Phone and Meeting Booths promote low-carbon footprint, sustainability, safety, design, functionality, and form.

The frame is a visual celebration of engineering and design, sleek in appearance and linear in form, unlike other bulkier products on the market.

### Ground Breaking Tech

SoundBox is a fully engaged company focusing on the highest technological advancements. Creating highly efficient, creative, focused working environments. We are continually striving for excellence in technology and acoustic engineering.

### Damping Feet

Bearing capacity and damping coefficient are the basic requirements for designing vibration-damping products. SoundBox insists on using virgin rubber-modified material for damping parts because such rubber has a much better damping coefficient and is more durable.

At the base of our pods and booths, there are four damping “feet” to support the booths, which allows an 8mm gap, which assists in the potential of the movability kit and mobility of the pod when required.

### Turbo Fresh Air System

High air pressure and low noise turbine fresh air system, and labyrinth-type air ducts effectively reduce the excessive noise inside and outside the booth. With the 125m<sup>3</sup>/h large air volume operation efficiency, air circulates every two minutes, and ensuring excellent, refreshing, and comfortable airflow.

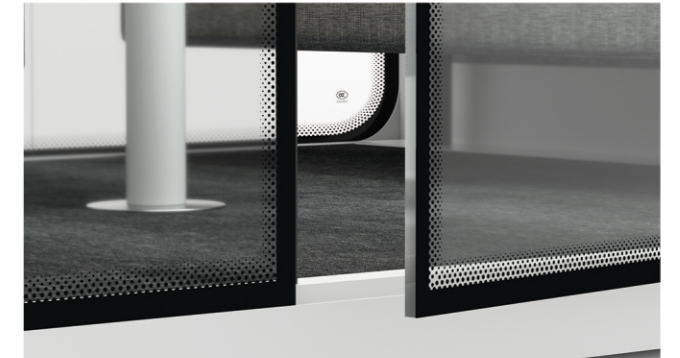

### Preferred Furniture

Primarily an acoustic control company, technically engineers; design-wise, we are creators. Our furniture packs have been developed over years of trials and customer feedback: functional, comfortable, and organic design whilst still maintaining hard-wearing upholstery, build quality, and finish.

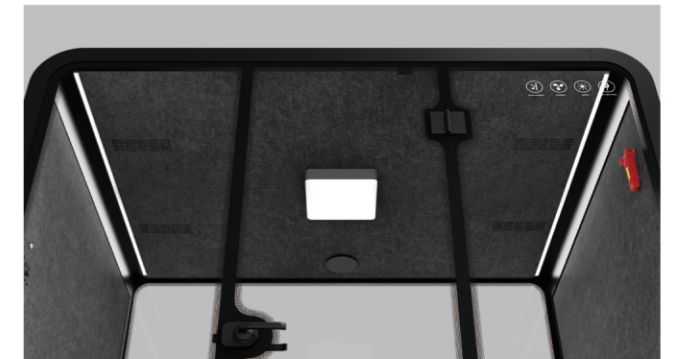

### Sound Insulation

INSUL MARSHALL ACOUSTIC simulation accurately predicts and realises the sound insulation performance of the booth. The standard and plus versions cater to different requirements based on the surrounding environment.

### Lighting

Our phone booths and pods are fitted with the 4000K natural light colour temperature LED lighting systems. Versions of fittings to different model sizes ensure the perfect lighting performance of various booths.

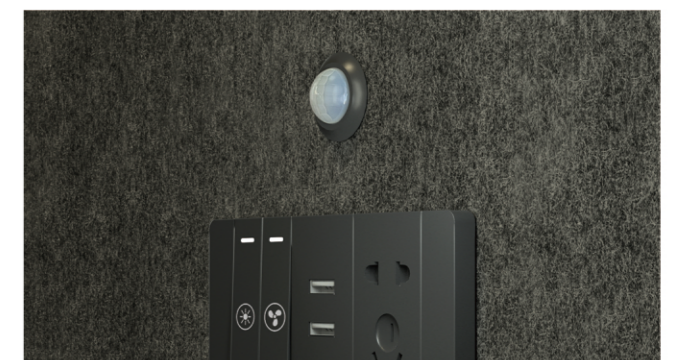

### Simple Assemble

Our design philosophy has always emphasized simplicity and a minimalistic approach; hence our whole model only requires simple assembly and fixing.

### Motion Sensor

We care about energy saving and environment protection. SoundBox booths and pods are equipped with motion sensor to control the lighting and ventilation system. It will be fully functioning when, and only when you are inside the booth.

# Office

## Third Space

Providing a good environment and platform for ideas creation and exchange is part of our daily work. Our booth is the platform that gives you your desired environment.  
A cup of coffee, a private call or a small talk, whenever you need to take a break from work and need a place to relax.

# Public

## Third Space

It is always noisy when we want to take some rest in public places. It is always difficult for us to make a phone call and to have a conversation when we are in public places such as a hotel, airport, train station, or hospital. SoundBox Silence Booth creates a private space inside the public area, giving you enough quietness.
